

NO SLIP NV CARE & MAINTENANCE PACKAGE

no slip nv

There is no specific maintenance package or instructions for the No Slip NV treatment after it being applied.

It is a non-topical solution so buffer machines will have no adverse effect.

There is no grit or etching of any kind with our product.

The aesthetics and surface of the material remain the same after treatment.

Once the treatment has been applied the client can continue to use the same commercial cleaning products and/or maintenance services as previously utilized.

If the material is sealed or a polishing agent is applied after treatment, the treatment would need to be re-applied.
